

## Overview of presentation

**Inhibitors in Hemophilia** focuses on one of the most important challenges facing patients with hemophilia. Inhibitors are antibodies produced by the immune system that keep infused FVIII and FIX from working. Managing inhibitors is vital to successfully controlling bleeding episodes. The following subjects are covered in this presentation:

- The basics of hemophilia A and B
- Treatment of FVIII and FIX with infused factor
- How inhibitors impact hemophilia treatment
- Who is at risk
- How immune tolerance induction works

The presentation closes with practical advice for living with inhibitors, including insurance-related issues and working with your hemophilia treatment center to receive the best care.

## Introducing your speaker: Susan Geraghty

Susan Geraghty, RN, MBA, has more than 20 years of experience coordinating care for people with bleeding disorders in Colorado, Wyoming, and Montana.

Ms. Geraghty's areas of hemophilia expertise include orthopedic procedures (joint replacement) and joint preservation. She specifically focuses on the challenges patients with inhibitors face in controlling or preventing bleeds associated with their condition.

The experience Ms. Geraghty brings to the treatment of hemophilia is wide-ranging. She provides one-on-one care as a case manager, collaborating with patients to create optimal treatment plans and help them navigate the challenges of the insurance system. She is also a mentor who educates future nurses, physical therapists, and doctors in the treatment of bleeding disorders.

## CSL Behring: The sponsor of Common Factors

CSL Behring is committed to changing the lives of people with serious and rare bleeding disorders. Our heritage of innovation, combined with our dedication to patient support through unique patient programs, makes us leaders in the research and development of advanced treatments for hemophilia A and other bleeding disorders.
